Technical Characteristics
-Potable water tube: Made from Type "L" copper, certified to ASTM B88;
-Minimal copper coil diameter is 3/4 inch (19mm), profiled in a "D" shape to maximize heat transfer and minimize pressure drop;
-Approved maximum pressure rating of 150 lbs/in2 (1035 kPa);
-Potable water connections are the required diameter to connect to the water feed for the application. [Standard diameters: 3/4, 1, 1-1/4, 1-1/2 inch (19, 25, 32, 38 mm)].

Drain center tube
Made from DWV copper, conforms to ASTM 306;
The nominal diameter is the same as the drainage pipe on which the device is installed. [Standard diameters: 3, 4 inches, (75, 100mm)].

Certifications
The length of the heat exchanger is accordance with engineering drawings. [Standard length: 30 to 100 inches (762 to 2540 mm]

The thermal effectiveness of the heat exchanger must be certified to CSA B55.1 (12). [Models TD442B, TD460B and TD472B only].

The construction of the heat exchanger must be certied to CSA B55.2 (12) . [All models]

Installation
The drain water heat exchanger will be integrated into the plumbing system using mechanical joints. The heat recovery unit will be installed vertically, as recommended by the manufacturer.
